

Security organization worksheet

Part 1: Describe your security interests
• Cloud Security • GRC • Digital Forensics
Part 2: Identify three organizations and include their mission or objectives
• Organization 1: Mint Group • Organization 2: Deloitte / KPMG / PwC / EY (Big Four, SA offices) • Organization 3: DFIRLABS
Part 3: Write out which organization aligns with your interests and why
• Organization 1: Because they run cloud security and DFIR together, this employer would let you build toward two of your three focus areas simultaneously — cloud security work that feeds directly into incident response experience. Why you'd want to work there: Established since 1999, ISO 27001/22301 certified — the kind of employer stability and formal process maturity that's valuable while you're still building your specialist track record. • Organization 2: Big Four firms typically run structured graduate and junior consultant intakes with formal training toward recognized certifications (CISA, CRISC) — one of the more realistic "structured entry path" options into GRC specifically. Why you'd want to work there: Brand-name experience on a CV opens doors throughout your GRC career, and the scale of clients means you'd see governance challenges across many industries rather than one narrow sector. • Organization 3: • Best choice for my professional interests: Their approach to digital forensics goes beyond simply identifying evidence — it's about interpreting and analysing it to answer who, what, when, where, why, and how, with findings that hold up in court. If your DFIR interest leans toward the

investigative and legal side (not just technical incident response), this is the most direct path in the country.
